

# Throw away your PAPER & PENS!

## Digital Signature Module

The Digital Signature Module (DS) captures signatures from Claimants, Submitting Officers, Receiving Officers, Transfer Personnel, and any other responsible party. Secure, time-stamped, electronic signatures eliminate the need for paper receipts in the Property & Evidence section.

- No more printing two copies of the property receipt to be signed by both parties
- Eliminate masses of paper handling and archiving
- Integrated ACE Digital Signature software enables users to digitally fill in paper forms and manually sign records
- Includes Topaz™ signature devices that provide “high-quality signature capture solutions for every signature application”
- Triple-tier security ensures compliance with world-wide regulations and eSignature standards.
- Save physical space with PDF capture and encrypted SQL storage. Reprint on demand for court or other requests.

**Captured signatures appear on the appropriate signature line of the receipt or report and are stored securely within the ACE database for future viewing.**
